Foreword

Part 1 My early doubts

1 The disappearing splash

- 1.1 The drop that doesn't splash 1
- 1.2 The journey from confusion to understanding 2

2 Catching my attention

- 2.1 About an innovation 4
- 2.2 Rejection and questions 4
- 2.3 The overall impression 5
- 2.4 A serious flaw 6

3 Thinking in the raw

- 3.1 To debate requires courage 7
- 3.2 The process of thought 7
- 3.3 Clear logical thought 8
- 3.4 A natural process 9
- 3.5 Be in awe of your mind 10

4 The starting point; the early questions

- 4.1 Historical understanding 11
- 4.2 Misgivings 12

5 My first thinking about quasars went like this

- 5.1 A revelation 14
- 5.2 The inert surface of a black hole 14
- 5.3 A new view of a rotating neutron star 15
- 5.4 Gravity prevents surface radiation 15
- 5.5 The early development of the black hole 17
- 5.6 The accretion disc is swallowed by the event horizon 17
- 5.7 Low density matter flowing and pooling on outer surface 18
- 5.8 The black hole shape changes and gravity starts to reverse 18
- 5.9 The final form before instability 18
- 5.10 Instability sets in and the quasar starts up 19
- 5.11 The jet flows create new galaxies 19
- 5.12 Both big bang and steady state theories represented 20

6 Consolidating my thinking

- 6.1 Initial reactions 22
- 6.2 A much wider view 23

7 The rest of my thinking. Gravity from a new viewpoint

- 7.1 Thinking in the raw 24
- 7.2 Questions 24
- 7.3 Liquid Helium flowing up the sides of a vessel 26
- 7.4 Finding myself at odds 28
- 7.5 Clouds 28
- 7.6 Stability within clouds 30
- 7.7 Gravitational reverse glow 30
- 7.8 A vehicle for transmission 31

7.9	Connection	31
7.10	Zero gravitational reverse glow	32
7.11	Now move away from the centre	32
7.12	An example	33
7.13	Tangential compression prevents collapse	33
7.14	Mass diameter must now exceed event diameter	34
7.15	Low gravity void	34
7.16	The undetachable gas molecule	35
7.17	The result is	35
7.18	Other questions remain	36
7.19	New thoughts	36
8	A debate; With Professor Derek Sears	
8.1	An innocent question	38
8.2	Not describing a centre of gravity	39
8.3	You cannot balance a mass with a zero force	43
8.4	Your feet toward the surface	43
8.5	Why will that be so?	46
8.6	A proposal for calculating gravity at the centre of a mass	47
9	Gravity – A discussion	
9.1	There must be a connection	50
9.2	Visible effects	50
9.3	Even more questions	50
10	Gas molecules – A discussion	
10.1	An illogical confusion	52
10.2	The gas molecule is central to this debate	52
10.3	Gas expansion demonstration proposals	53
11	You can see gravity	
11.1	You must have a connection	54
11.2	The confusion	54
11.3	An orange in a net	55
11.4	Dynamic effects, a sand vortex	55
11.5	Another elegant vortex	57
11.6	Make your own vortex	60
11.7	Looking forward to controlling turbulence	61
11.8	A model for surface turbulence on a planet	62
11.9	Weather effects?	62
11.10	Detaching the vortex	62
11.11	Scintillation is gravity	63
11.12	An atmosphere at the surface of every object in space?	63
11.13	Gravity is there to touch	63
11.14	Is music a gravity wave?	63
12	The perfect red herring	
12.1	Gravitational reverse glow, the perfect red herring	64
12.2	The paradox of the quanta	64
12.3	What is the connecting mechanism?	65

Part 2 The New Thinking

13 The external force field attachments of the proton

13.1 The Proton and the Electron from a new viewpoint	68
13.2 A Black Particle?	69
13.3 Expressive and Impressive force fields surrounding atoms	71
13.4 The answers lie beyond the orbit of the electron	72
13.5 Expressive and Impressive Force Fields	80
13.6 Attachment Force Columns	87
13.7 Force Column from the surface through a steel plate	89
13.8 Attachment forces within Solid Mass	90
13.9 Always a negative value	90
13.10 Both sets of forces combine	91
13.11 Why – the drop doesn't splash	95
13.12 Transfer of forces between different level surfaces	96

14 Gravitational properties of solid mass

14.1 What happens when you turn the shovel over?	97
14.2 You did not apply logic to your thinking	97
14.3 The solid mass object	98
14.4 Single particles of mass, each attached to each other	98
14.5 Zero balanced gravity	99
14.6 Inverse Square Law Does Not Apply	101

15 Tidal effects of balanced gravity

15.1 The orange in a basket effect	102
15.2 There is no “force field” passing through the planet	104

16 Understanding turbulence

16.1 Understanding Turbulence	108
16.2 A detailed solution to the subject of Turbulence	111
16.3 Wind turbulence	117
16.4 Shockwaves	117
16.5 My conclusions are	118
16.6 Notes for reflection	119

17 No Discrepancies

17.1 To add to the debate about turbulence	121
17.2 Gravity was never there	122

18 A brief excursion into Ideal Gas Law

18.1 Existing Gas Law describing temperature and pressure	126
18.2 Temperature and pressure not caused by linear motion	127
18.3 The new rules for temperature and pressure	128

19 The perfect question: Where does solid start and energy finish?

19.1 An empty tube?	130
19.2 Force fields beyond the surface of a conductor	133
19.3 Superconductivity	133
19.4 Static Electricity in clouds	134
19.5 Drag and inertia	135
19.6 Food for further thought	135

20	Photons of dynamic energy	
20.1	Different forms of energy	137
20.2	Radio waves	137
20.3	Heat	138
20.4	Light	138
20.5	What are photons of dynamic energy?	139
20.6	The local energy environment surrounding the proton	143
20.7	Important points about the temperature of a solid mass	144
20.8	How entropy works	144
20.9	The speed of light	145
21	Disproving wave-particle duality	
21.1	The force environment	146
21.2	The Double-slit Light Box	147
21.3	The photon is a ripple of dynamic energy, not, at one and the same time; a wave	148
21.4	Red Shift denotes distance not speed	150
Part 3 Back to Cosmology		
22	Let us return to the singularity	
22.1	The conventional view	152
22.2	The event horizon	152
22.3	The mass photon event horizon	152
22.4	The coffee cup is now full	154
22.5	Super dense inert mass	155
23	The “Myth” <u>is</u> the unavoidable singularity	
23.1	The assumption does not stand up	156
23.2	The BIG mistake with the event horizon	156
23.3	Additional mass is outside	156
23.4	Mass with no photons has no motion	157
23.5	Balanced gravity effects	157
23.6	There is nothing more than that	158
23.7	The “Event” was reaching ‘One’	158
23.8	Get to grips with reality	158
24	The birth of a Quasar	
24.1	A quite different structure	160
24.2	At the very centre	162
24.3	Extra mass resides outside	163
24.4	The mass/photon event horizon	163
24.5	The mass between horizons	163
24.6	Photons must drain away	163
24.7	The new balance point	165
24.8	Energy pools to an annular band	166
24.9	The event horizon band splits into two	166
24.10	The structure of a quasar	167
24.11	Variety of effects	171
24.12	Another question	171
24.13	Very strange effects to stretch keen minds	172
24.14	Planetary Nebula; are they a MARDO?	172
24.15	The Galactic Core Object and accretion disc	173

Part 4 The proton, electron and nucleosynthesis

25 The inviolable structure of the proton

25.1 The proton must have a negative pole	178
25.2 When does positive charge become negative?	178
25.3 The proton force field shell is inviolable	179
25.4 The <u>quantum</u> of force becomes inviolable	181
25.5 Diameter must be relative to the energies involved	182
25.6 The proton's electron must float upon the outer surface	182

26 The source of the proton?

26.1 Back to the beginning again	183
26.2 Extreme energy environment	183
26.3 Is this the source of the proton?	184
26.4 A total soup of energy and mass	186

27 The electron; the proton's electron and the induced electron

27.1 Why does the electron stay with the proton?	188
27.2 Why the electron floats at a distance from the proton?	191
27.3 The positron. A positively charged electron	192
27.4 The other electron? An induced, conducting electron	193
27.5 A recent example of induction at the atomic scale	194
27.6 Revealed large magnetic and electric fields	197
27.7 The source of the electrons charge	198

28 Nucleosynthesis

28.1 Setting the scene	200
28.2 The primary mechanism is both elegant and simple	200
28.3 The secondary mechanism "Snaps" the poles together	201
28.4 The inviolable force field of the proton is a part compressed spring	202
28.5 You must add energy to compress the surface of the shell	202
28.6 Additional energy is locked into compression	203
28.7 Mass is relative to energy. $E=MC^2$	204
28.8 The Series locking will become complex	210
28.9 Add complexity adds more energy capacity	211
28.10 Elastic compression of spheres	212
28.11 The new rules for nucleosynthesis become	215
28.12 No change to the laws of thermodynamics	218
28.13 There must be a sum total	218

29 The neutron. The biggest red herring of them all

29.1 A perfectly logical assumption	221
29.2 The inviolable attachment	221
29.3 Alpha and all the rest	225

30 Dynamic energy is energy, mass is electromagnetic force plus compressed dynamic energy

30.1 Dynamic energy is simply that, energy!	228
30.2 Mass is electromagnetic force plus compressed dynamic energy	228
30.3 Electricity is always induced	230
30.4 Einstein's $E=MC^2$ is surely all about energy, not mass?	230

31	Unity ?	
31.1	There are no new forces to be discovered	231
31.2	Maxwell states:	232
31.3	Generating Electricity is a function of the External force fields of the Proton.	233
31.4	All forms of energy stem from proton movement	236
31.5	Now we can see when energy becomes a solid	236
31.6	Gravity is the same within a solid mass	237
31.7	Proton force fields are the conductors of electricity	238
31.8	Magnetism	240
31.9	Antimatter cannot exist	240

32	New forms of energy	
32.1	Magnetism has to be reconsidered	241
32.2	We must review nuclear energy	242
32.3	Chemical energy?	242
32.4	A final thought	243

Part 5 Cosmology – the endgame

33	Too many X-Rays? Yes, way too many!	
33.1	A eureka moment	245
33.2	Ultra Luminous X-Ray sources	245
33.3	The Eddington limit	246
33.4	Insufficient gravity potential	246
33.5	The outer limit is a very long way from the surface	247

34	Space and time diagrams	
34.1	No infinite distortion in space time	249
34.2	No warp speed	249

35	All the rules need rewriting	
35.1	No rapid inflation	252
35.2	Existing assumptions must be false	252
35.3	Red shift means simply distance	253
35.4	Clouds, a very similar process	253
35.5	Local region becomes fully inflated	253
35.6	Mass congregates	253
35.7	All gravitationally connected	254
35.8	An intermediate stage	254
35.9	A continuous process	254
35.10	Everything changes	255

36	Some further thoughts	
36.1	The Neutron star revisited	256
36.2	Pulsars have orbiting Iron cores	256
36.3	Effects in vacuum tubes	257
36.4	The Pioneer anomaly	257
36.5	Neutron deficiency of the sun	258

37	A contribution: To the wider debate about our origins	
37.1	An incomplete view	259
37.2	Stretching our imaginations	259

38	A misconceived cone of perception	
38.1	Illustrations show a cone	261
38.2	A one sided view	262
38.3	Density must increase	262
38.4	View from the periphery	263
38.5	Dots on a balloon	263
38.6	But it gets better still	264
39	Revising the timescale	
39.1	Revising the timescale	265
39.2	The new fundamentals	266
39.3	How large is the largest gas molecule?	266
39.4	What forms the outer boundary of the Universe?	267
40	The obverse side. Another view of the beginning	
40.1	The attaching force	269
40.2	All the mass dispersed	269
40.3	A clock pendulum	270
41	Galaxies? – The answers	
41.1	The “missing” mass, there is no missing mass	271
41.2	A mass table	271
41.3	The event horizon is not at the surface of the object	272
41.4	Using our imaginations	273
41.5	The structure of a galaxy	274
42	The Whirlpool Galaxy in a new light	
42.1	A new model	275
42.2	But first the facts	275
42.3	Immense tidal forces	277
42.4	The outer ring breaks	280
42.5	The mass balance changes	281
42.6	Massive loss of energy	281
42.7	A disaster on an enormous, almost indescribable scale	281
42.8	A carapace of stars	282
42.9	No “Jet”	282
42.10	Mass stripped of energy	283
42.11	Barred galaxies	283
42.12	A beacon?	283
43	A new model for the events leading up to Supernova 1987A and subsequent evolution of the object	
43.1	First, the press release	285
43.2	The new model – Events leading up to the supernova	289
43.3	Questions, Questions, Questions???	306
43.4	Synopsis	308
44	Super Dense Inert SDI Mass	
44.1	What are we looking at?	309
44.2	Mass and energy are two quite separate things	310
44.3	Mass is energy, yes, but it has two functions	310
44.4	Energy drains away, all of it	311
44.5	Collapse occurs in a zero energy environment	311

44.6	There are no new neutrons created by the collapse	312
44.7	Now, the energy is released from the mass	312
44.8	How small is the dipole at the centre of a proton?	313
44.9	Some thought provoking numbers	316
44.10	Normally, the mass relaxes	316
44.11	The Supernova mechanism	317
45	My view of the universe	
45.1	Time beyond imagination	320
45.2	The philosophers elbow	320
45.3	We must recognise our new frontier, the universe	321
	Part 6 Questions needing answers	
46	An inaccurate assumption	
46.1	Critique - The Ideal Gas law	325
46.2	Accurately defining the volume of any single STP gas molecule	330
46.3	A Vernier Calibration Device	332
46.4	An Atom Counting Device	336
47	The structure of the Test Bar	
47.1	The Structure of the Test Bar	339
47.2	Chemical analysis	340
47.3	Weight in Grams & Atomic Weight (AMU)	340
47.4	Test Bar Dimensions	341
47.5	Measurement Aiming Points	341
47.6	Surface Contact Forces	341
48	18 Inch Test Bar set up notes	
48.1	Experiment Aiming Points	343
48.2	Vertical Set Up	351
49	Differential double-slit experiments	
49.1	Differential, double-slit light box	353
50	Low temperature Helium chamber double-slit experiments	
50.1	A single Helium gas molecule	359
50.2	Low temperature Helium chamber double-slit experiment apparatus	360
50.3	Placing a double-slit experiment inside a hyperbaric chamber	360
50.4	Using different mass environments	363
50.5	While reducing the number of gas molecules	363
50.6	Polarisation effects on photons with the mass object experiments	364
50.7	Shockwaves – Why we can actually see them	364
50.8	Nikola Tesla	364
51	Mapping the gas molecule attachment forces of an 18 inch diameter test bar	
51.1	A logical debate	367
52	Balanced forces	
52.1	Balanced forces within the mass	371
52.2	Note about Casimir effect and slip gauges	371
52.3	Slip gauge stack gravity detector	372
52.4	Four further balanced gravity experiments	381

53	Using nanoparticles	
53.1	Nanoparticle charge separation experiment	383
53.2	Calibration of the nanoparticle charge separation experiment	385
54	A visual gravity observatory	
54.1	Viewing Gravity at work	386
54.2	Planet surface gravity field effect experiments	386
54.3	Sense gravity with your fingertips	387
54.4	Observing the connection	387
54.5	Viewing gravity in real time	388
54.6	Replicating the aircraft vortex	395
55	Defining the speed of light	
55.1	Light speed experiment	398
55.2	Rotating light beam experiment	399
55.3	Some final thoughts about light speed experiments	400
56	How are galaxies born?	
56.1	The “twin” jets	402
56.2	The starting point, defining a set of parameters	402
56.3	Towards the full universe, you need further rules	406
56.4	Try this yourself	409
57	How does the nucleus form?	
57.1	The last piece of the jigsaw puzzle	410
57.2	The proton has a specific mass	410
57.3	The neutron is simply energy	411
57.4	The external energy field must be brought to balance	411
57.5	Now we see what happens when the external pressure is in balance with the internal pressure of the proton’s inviolable shell	411
57.6	Protons do not bunch into a ball	414
57.7	Your simulation exactly relates to existing knowledge	414
57.8	Inviolable energy must be pushed out of shape	417
57.9	There are many different combinations	418
57.10	New, different energy ripples come into play	418
57.11	Energy packages move about as they settle in	418
57.12	Adding a neutron to create an isotope	419
57.13	Keep this very simple	419

Illustrations

Dust jacket:	Ripples of energy. (See: Stress creates photons - Illustration 47, Page 142)	
End paper, inside cover:	The Coles Quasar with an annular ringed orifice in cross section	
Frontispiece:	The compressed spring is heavier than the uncompressed spring. (See: Energy locked into compression - Illustration 70, Page 204)	
Preface:	The shock wave is attached to the mass of the engines	
1	A splash of liquid showing the classic “crown”	Opposite 1
2	Liquid Helium climbs up the side of the vessel	26
3	A single Helium gas molecule will become visible	27
4	Old view and new view of the nature of gravity in a planet	41
5	Gravity at the centre of <u>any</u> mass object	42
6	Both sets of forces superimposed	42
7	A diagrammatic view of the nature of the gravity field at the surface and just off the centre of a large mass.	45
8	A cone of sand dust	56
9	The walking stick vortex	60
10	The atom	68
11	The boundary of the energy of the proton	74
12	The proton and electron energy fields interact	77
13	The actual shapes of the boundaries	78
14	The expressive force field of the proton	80
15	The impressive force field of the electron	81
16	The interaction of a proton’s expressive force field and an electron’s impressive force field	82
17	The positive force field of the proton	83
18	The negative force field of the electron	84
19	Now let us place the two together	85
20	Now I show several such atoms	86
21	The attachment force column vertically	88
22	Attachment force column passing through a steel plate	89
23	Now we show both sets of forces on each side of the column	94
24	Two particles of mass, not touching, but showing their respective force fields	99
25	Three particles of mass sit beside each other	99
26	A single particle of mass with its internal balanced forces	100
27	There are seven separate points of balanced forces	100
28	On Earth the tides cause two bulges of water	102
29	Tidal bulge one side only	103
30	Centre of zero balanced gravity has not moved	105
31	The North Pole of Saturn’s moon Hyperion	106
32	Both poles of Saturn have a vortex	107
33	Gas molecules inside a tube	110
34	Now we see the whole force field	113
35	Individual force fields naturally interconnect	114
36	A shear line has been cleaved upwards	115

37	The slightest perturbation will cause instability	116
38	Variation in size cause change in direction	116
39	The greater the mass, the greater the effect	123
40	Distorting the gas molecule attachment force columns	124
41	The shock wave is attached to the mass of the engines	125
42	Where does solid start and energy finish?	131
43	Proton force fields inside an evacuated tube	132
44	Gigantic Jets between a thundercloud and the ionosphere	134
45	Regardless, the external force fields will negate each other	140
46	Lines of attached force under stress	141
47	Ripples of energy must be created	142
48	The “event” has been reached	153
49	Shell of super dense inert mass is forming	154
50	A cross section of Earth	161
51	The initial event horizon remains fixed and SDI mass increases	164
52	A shell of zero balanced gravity forms within the SDI mass	165
53	Event horizon bands a cross section	168
54	A cross section showing energy escaping	169
55	The growth sequence from a black hole to a quasar	170
56	A cross section of a Galactic Core Object	174
57	Another cross section of a Galactic Core Object	175
58	A cutaway view of a galaxy showing the Galactic Core Object	176
59	The single proton	180
60	A complete shell of electromagnetic force surrounding the proton	181
61	If we see a proton as simply a flat surface	184
62	If we add an external force field	185
63	If we try and overcome our problems	185
64	It is not possible to have two connections between the two poles	186
65	We add the simplest lines of force attaching the two poles	189
66	Central core cannot close. The source of the electron, (and positron)	190
67	The proton’s electron represents the balance of the forces	192
68	The proton has a shell that acts as though the surface of an inflated balloon	202
69	When both energy fields balance the outer surfaces may be further compressed	203
70	Energy stored in a spring must increase the mass of the spring	204
71	Two protons “Snap” together	205
72	An exterior boundary	206
73	Uniform boundaries between each atom	207
74	Energy of the proton extends to the boundaries	208
75	The energy balance begins	208
76	Larger atom with five protons	209
77	We bring the two energy environments into balance	209
78	Any proton may freely move into close association with any other	210
79	If we apply a force to a sphere	213
80	Two contacting surfaces will be flat and equal	214
81	More than one possible scenario	214
82	A neutron splitting an atom	220
83	Two protons have destabilised	222
84	A compressive wave of energy is seen ejecting	223

85	The actual size must be very minute, a graphic reference	224
86	The Helium atom	226
87	At the outer edge of the outer event horizon gravity must reduce	248
88	A space time diagram showing balanced gravity effects	250
89	The space time diagram for a Coles quasar	251
90	The WMAP image of the expansion of the universe	261
91	The break-up sequence of a galactic core object	278-280
